

# MULTI-SCENARIO APPLICATION ENERGY STORAGE OUTPUT FUNCTION

Why should EVs be used as mobile energy storage devices? In summary, EVs as mobile energy storage devices participate in energy management and operational optimization for integrated energy system, which not only significantly realizes the matching supply and demand, but also improves the flexible, low-carbon and sustainable operation for integrated energy system.

What is mobile energy storage device (EV)? As mobile energy storage device, EVs participate the power dispatching of IES, which involves the energy interaction between EVs and building, so as to improve the flexibility of system operation .

Is there a collaborative strategy between EV load and building load? Ding et al. investigated the collaborative strategy between potential variable load and EVs load in office building, and proposed an optimal scheduling scheme combined orderly charging of EVs with pre-cooling of air conditioner, in which building load variance decreases by 17.81 %.
