Three-dimensional porous  $\text{NiO}/\text{Ni}(\text{OH})_2$  composites consisting of  $\text{NiO}$  nanoparticles and amorphous  $\text{Ni}(\text{OH})_2$  nanosheets were prepared successfully for supercapacitors.  $\text{NiO}$  nanoparticles were dispersed uniformly among  $\text{Ni}(\text{OH})_2$  nanosheets. The capacitance of the composites reached  $1375.45 \text{ F g}^{-1}$  at  $0.5 \text{ A g}^{-1}$ , which was much higher ???

The material not only presents a remarkable theoretical specific capacity ( $3579 \text{ mAh g}^{-1}$  for  $\text{Li}_{15}\text{Si}_4$ ), exceeding traditional graphite anodes by over tenfold, but it also stands out for its

Battery safety has always been a concern for high-energy-density configurations with nickel-rich cathode ( $\text{Ni} > 0.6$ ). Tremendous heat released from the reaction between highly flammable electrolyte and cathode under mechanical, thermal or electrical abuse may cause thermal runaway. Herein, we explore the heat release of various solvents with fully charged ???

Shichao Zong's 24 research works with 808 citations and 1,406 reads, including: Ultrathin porous graphitic carbon nitride from recrystallized precursor toward significantly enhanced photocatalytic

Invest NI has offered the company ?206,000 of support towards the new jobs, support to participate on its collaborative growth programme, technical development assistance and R& D. Two of the new jobs are now in place. Eddie McGoldrick, Director and Co-Founder of The Electric Storage Company, said: "Our business is based on moving customers towards ???

XPS analysis of hard carbon anodes a, b XPS spectra of C 1s with different etching times (0??25 min) collected from the cycled hard carbon in 1 M NaPF<sub>6</sub>-EC/DEC electrolytes (a) and corresponding

Following a competitive tender, NI Water has awarded Continu Ltd funding under Phase 2 of the SBRI (Small Business Research Initiative) to undertake a collaborative research project into the benefits of the use of large-scale battery storage technology to store and use renewable energy. NI Water is a major user of energy and the largest single

The vanadium flow battery (VFB) as one kind of energy storage technique that has enormous impact on the stabilization and smooth output of renewable energy. Key materials like membranes, electrode, and electrolytes will finally determine the performance of VFBs. In this Perspective, we report on the current understanding of VFBs from materials to stacks, ???

Electrocatalytic water splitting is a feasible technology that can produce hydrogen from renewable sources. The oxygen evolution reaction (OER), which has a slower kinetics and higher overpotential than the hydrogen evolution reaction, is the bottleneck that limits the overall water splitting. It is essential to develop efficient OER catalysts to reduce the anode ???

We are pleased to announce one of our latest Battery Energy Storage System (BESS) for Northern Ireland. This technology plays a vital role in our local energy market. The Climate Change Act (NI) 2022 has set a bold target of 80% renewable generation by 2030, a deadline which is approaching rapidly.

First-principles calculations predict that the first oxidation process  $\text{Ni}^{2+} \rightarrow \text{Ni}^{3+}$  occurs easily, whereas the second electron transfer in  $\text{Ni}^{3+} \rightarrow \text{Ni}^{4+}$  is strongly hindered in multilayer materials by both the interlayer hydrogen bonds and the domain H structure induced by the Jahn-Teller distortion of the  $\text{Ni}^{3+}$  ( $t_{2g}^6 e_g^1$ )-centered

Electrochemical Energy Storage Properties of Ni-Mn-Oxide Electrodes for Advance Asymmetric Supercapacitor Application. Langmuir 2019, 35 (25), Honglei Li, Zhixu Jian, Yalan Xing, Shichao Zhang. Self-assembled hierarchical porous  $\text{NiMn}_2\text{O}_4$  microspheres as high performance Li-ion battery anodes. RSC Advances 2018, 8

AbstractThe development of high-performance electrode materials is a long running theme in the field of energy storage. Silicon is undoubtedly among the most promising next-generation anode material for lithium batteries. Of particular note, the use of nano-Si, as the milestone advance, has opened the door of the commercialization of silicon, but is still hindered by issues related to

A 50MW battery storage site in Northern Ireland, UK, has been energised by developer Low Carbon and investment fund Gore Street Energy Storage Fund. The lithium-ion project, located at Drumkeel, County Tyrone, is being lauded as the country's largest energy storage project and is to serve the Single Electricity Market. It was completed on time

On July 30, the Central Enterprise New Energy Storage Innovation Consortium was established in Beijing. The consortium is a national-level new energy storage innovation platform jointly led by State Grid Corporation of China and China Southern Power Grid Co., Ltd. under the guidance of the State-owned Assets Supervision and Administration Commission of

1 Introduction. Metal-air batteries, especially rechargeable Zn-air batteries (ZABs) with aqueous electrolytes, have recently sparked a wave of research because of their higher energy density, better safety, and more eco-friendliness characteristics compared to traditional rechargeable batteries. ZABs involve in two significant reactions of oxygen reduction (ORR) during

Energy Storage Materials 50 (2022) 564-571. Jing Xiao, Junwei Han, Debin Kong, Huifeng Shi, Xiaojuan Du, Ziyun Zhao, Fanqi Chen, Peng Lan, Shichao Wu, Yuefei Zhang, Quan-Hong Yang. "Nano-spring" confined in a shrinkable graphene cage towards self-adaptable high-capacity anodes. Energy Storage Materials 50 (2022) 554-562.

The development of high-performance electrode materials is a long running theme in the field of energy storage. Silicon is undoubtedly among the most promising next-generation anode material for lithium batteries. Of particular note, the use of nano-Si, as the milestone advance, has opened the door of the commercialization of silicon, but is still hindered by issues related to cost, side

Thus, the NiFe-LDHS electrode showed outstanding catalytic and energy storage properties. Specifically, the OER overpotential was only 224 mV at 10 mA cm<sup>-2</sup>, and the stability in an alkaline

The ever-growing demand for energy has driven the development of energy-storage technologies to go beyond lithium-ion batteries and attain a higher energy density and lower cost 1 cause of the

Lithium-sulfur batteries are a promising energy-storage technology due to their relatively low cost and high theoretical energy density. However, one of their major technical problems is the
