

NIGER ENERGY SYSTEMS LIMITED

What is Niger's energy system? As shown in figure 2, the most striking feature of Niger's energy system is the dominance of biomass. This represents 79% of total consumption and meets 83% of household energy needs. Biomass in the form of fuelwood, charcoal and agricultural residues is used in inefficient cooking appliances.

What is Niger's energy profile? Niger's energy profile is typical of a low-income economy in that the household sector remains the main energy user. This signifies a limited use of energy in the productive sector. Households across Niger rely heavily on traditional biomass to meet their basic energy needs.

Does Niger need reliable electricity? The Government of Niger views providing reliable electricity and other basic energy services to all populations and parts of the country as a critical aspect of its inclusive economic transformation plans. It also recognises decentralised renewable energy options as a cost-effective alternative to grid expansion in many rural areas.

Where can I find information about energy in Niger? Find relevant data on energy production, total primary energy supply, electricity consumption and CO₂ emissions for Niger on the IEA homepage. Find relevant information for Niger on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

What is the institutional arrangement of Niger electricity sector? The institutional arrangement of Niger electricity sector is depicted in figure 4. The Ministry of Energy and Petroleum is responsible for policy development and the Multisectoral Regulatory Authority is the independent regulator.
