

PEC BATTERY DR CONGO

Can the Democratic Republic of the Congo produce lithium-ion battery cathode precursor materials? London and Kinshasa, November 24, 2021
??? The Democratic Republic of the Congo (DRC) can leverage its abundant cobalt resources and hydroelectric power to become a low-cost and low-emissions producer of lithium-ion battery cathode precursor materials.

Is DRC a good destination for sustainable battery manufacturing? Study identifies DRC as a favorable destination for the manufacturing of sustainable battery materials used in high-nickel batteries

Should lithium-ion batteries be expanded to DRC and Africa? ???As substantiated by the BloombergNEF report, the prospect of the expanding the value chain of development of lithium-ion batteries and electric vehicles value chains to DRC and Africa is both financially and environmentally appealing, ??? commented Dr. Sidi Ould Tah, Director General of the Arab Bank for Economic Development in Africa (BADEA).

How much would a DRC plant cost? This is three times cheaper than what a similar plant in the U.S. would cost. A similar plant in China and Poland would cost an estimated \$112 million and \$65 million, respectively. Precursor material produced at plants in the DRC could be cost competitive with material produced in China and Poland but with a lower environmental footprint.

How much cobalt does the DRC produce? ???The DRC produces about 70 per cent of global cobalt but captures just 3 percent of the battery and electric vehicle value chain.

PEC BATTERY DR CONGO

How can Africa extend its access to the battery industry? In so doing, the country and the rest of Africa can extend their access from the USD271 billion battery precursor segment to the more lucrative USD1.4 trillion combined battery cell production and cell assembly segments of the battery minerals global value chain.

In combination with the extended range of PEC test equipment, LifeTest supports the many specific functionalities required in battery testing labs. Drive cycle simulations (FUDS, DST???), thermal performance tests, high speed pulse tests (HPPT), life cycle tests, accelerated ageing tests and internal resistance measurement tests can be easily

Exclusive interview with Susannah McLaren, Head of Responsible Sourcing and Sustainability at the Cobalt Institute and Board Member of the Global Battery Alliance. She is also a member of the advisory ???

This includes Formation, Degassing, Ageing, Grading (capacity definition), Sorting (based on quality), Pack Assembly and End of Line Testing. Our equipment is designed for small, middle and large scale battery manufacturers for all advanced energy storage applications: stationary, aerospace, defense and automotive (e.g. HEV, PHEV, EV???)
