The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. First, there are many fixing methods, such as pile foundation

Yizhao International is a high-tech enterprise specializing in the production and manufacturing of photovoltaic brackets. It has established three factory areas in Tianjin, with a total floor area of over 60,000 square meters and an annual production

Photovoltaic flexible bracket is an emerging photovoltaic installation system, which is characterized by its flexibility and adaptability. Compared with traditional fixed photovoltaic brackets, flexible photovoltaic brackets can be flexibly adjusted according to terrain, lighting conditions, seasonal changes and other factors to maximize the power generation efficiency of a?

**Abstract:** In order to study the mechanical properties of the fixed photovoltaic bracket and its failure under wind load, the full-scale photovoltaic bracket specimen was designed and the destructive test was carried out by means of static loading. Through simulation and mechanical analysis, the design suggestions for the fixed photovoltaic support are given.

The roof type photovoltaic bracket is usually divided into two kinds of flat roof bracket and inclined roof bracket. Suspended photovoltaic bracket: usually installed at the bottom of buildings or other structures, using steel ropes to hang solar panels, the tilt angle or direction of the photovoltaic bracket can be adjusted as needed.

Over the years, they have accumulated a track record of producing and installing over 60GW of photovoltaic bracket systems. ATEC Group. Atec, founded in 2004, is a high-tech enterprise and an integrated developer and operator in the field of new energy. Tianjin Yizhao, established in 2015, is a company based in Tianjin, China.

Existing photovoltaic defect detection models based on deep learning, such as YOLOv5 and YOLOv8, have significantly improved the accuracy of photovoltaic defect detection. However, these models are too large, and their feature extraction ability is insufficient, leading to low detection efficiency and inability to cope with the continuous evolution of defects.
