Should a PV system be AC coupled or DC coupled? If the sun is shining and the power being produced is consumed immediately (i.e.,the power output from the PV array is directly feeding the loads rather than passing through the multimode inverter to charge the ESS) an AC coupledsystem architecture will be more efficient than its DC counterpart.

What is a DC-coupled Solar System? DC-Coupled system ties the PV array and battery storage system together on the DC-side of the inverter, requiring all assets to be appropriately and similarly sized in order for optimized energy storage and power flow.
