Here's how the math worked out. Each 240W solar panel array connected 5 in series produced 1200 Watts, 186 Volts, & 8 Amps. Then connecting all 6 arrays in parallel created a 7200W, 186V, 50A solar panel system. Grouping the panels 5 in series meant we had 6 total arrays (or 5S6P). It also meant that we had to create a bunch of solar wires to

You should know that there are limitations for series solar panel wiring. In the U.S., solar strings are required to feature a maximum voltage of 600V, so solar arrays comply with article 690 section 7 of the National ???

The 12V/24V in product titles (ex. 100W 12V Monocrystalline Solar panel) does not refer to the actual voltage (Voc or Vmp) of the solar panels, but rather to the voltage of the solar system or energy storage system to which the panel is best suited. The voltage of the solar panel must be higher than the solar system voltage.
