A ground mounted solar panel system is a system of solar panels that are mounted on the ground rather than on the roof of buildings. Photovoltaic solar panels absorb sunlight as a source of energy to generate electricity. A photovoltaic (PV) module is a packaged, and connected photovoltaic solar cells assembled in an array of various sizes.

Your solar panel orientation is an important part of the sizing of photovoltaic and solar thermal systems. Since solar power produced is directly proportional to the orientation of solar panels, the right orientation can not only maximize solar power but also decreases the cost of the project.. The orientation is composed of two parameters: direction and tilt angle.
