Virto.CAD is a solar PV design Add-On application for AutoCAD/BricsCAD, that focuses on utility-scale ground-mount and commercial rooftop Solar PV systems. Our intention with the Virto.CAD collaboration is to help solar park designers make their calculations and analysis with the right terrain model in a few clicks.

Solar panels are composed of many smaller photovoltaic cells, and each cell is essentially a sandwich of semiconductor panels. This multitude of PV cells makes up a solar panel. Sunlight is composed of photons, and when they strike the PV cells, the photons knock electrons loose from atoms, which creates the flow of electricity.

While the ordinary layman may not know, there is a vast difference between a photovoltaic cell and solar panels. Photovoltaic cells make up the structure of a solar panel, but the two have very different functions for the entire solar array. Essentially photovoltaic cells convert sunlight into voltage. Then the solar panel takes that voltage
