

PRICE ANALYSIS OF ENERGY STORAGE INDUSTRY

Are energy storage systems cost estimates accurate? The cost estimates provided in the report are not intended to be exact numbers but reflect a representative cost based on ranges provided by various sources for the examined technologies. The analysis was done for energy storage systems (ESSs) across various power levels and energy-to-power ratios.

What are energy storage cost metrics? Cost metrics are approached from the viewpoint of the final downstream entity in the energy storage project, ultimately representing the final project cost. This framework helps eliminate current inconsistencies associated with specific cost categories (e.g., energy storage racks vs. energy storage modules).

What are the different types of energy storage costs? The cost categories used in the report extend across all energy storage technologies to allow ease of data comparison. Direct costs correspond to equipment capital and installation, while indirect costs include EPC fee and project development, which include permitting, preliminary engineering design, and the owner's engineer and financing costs.

Which energy storage technologies are included in the 2020 cost and performance assessment? The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Why did the storage industry's performance metrics and cost estimates change? This research effort will periodically update tracked performance metrics and cost estimates as the storage industry continues its rapid pace of technological advances. Due to intra-annual uncertainty, the reported costs may have changed by the time this report was released.

PRICE ANALYSIS OF ENERGY STORAGE INDUSTRY

How long does an energy storage system last? The 2020 Cost and Performance Assessment analyzed energy storage systems from 2 to 10 hours. The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations.
