

# PRICE OF WATER STORAGE PUMP

---

How much does pumped water storage cost? In O&M costs pumped water storage facilities have a distinct advantage over the long term. The Taum Sauk Storage Facility and the Ludington Storage Facility have similar O&M costs of \$5.64/kW-year and \$2.12/kW-year. The various O&M costs of several pumped water storage facilities can be seen in Table 2.

How much does a water pump cost? The Mechanical Filtered Water Pump Station costs \$35,718, Mechanical WTP augmentation Chlorine System costs \$90,847, and Electrical WTP augmentation Chlorine System costs \$126,776. These are the options provided in the passage.

How much does a pumped storage facility cost? Large scale pumped storage facilities can have a capital cost ranging from \$1.3 billion to \$3.3 billion dollars, with over half of the cost coming from the construction and equipment. The price of operation and maintenance for pumped storage facilities generally range between 1.0 ??? 1.5% of the total operational cost.

What is pumped water storage? Water is pumped from the lower reservoir up into a holding reservoir. Pumped storage facilities store excess energy as gravitational potential energy of water. Since these reservoirs hold such large volumes of water, pumped water storage is considered to be a large scale energy storage system.

Are pumped water storage facilities efficient? Pumped storage facilities store excess energy as gravitational potential energy of water. Since these reservoirs hold such large volumes of water, pumped water storage is considered to be a large scale energy storage system. These pumped storage facilities are moderately efficient, with a round-trip efficiency of about 65-70%.

# PRICE OF WATER STORAGE PUMP

How do you calculate the cost of operating a water pump? The operating cost of a water pump is calculated using the formula:  $\text{Cost} = (\text{Volume Flow} * \text{Head}) / (\text{Pump Efficiency} * \text{Specific Gravity} * 3.67)$ . Where: Cost: The operating cost of the water pump, typically measured in \$/hour. Volume Flow: The volume of water being moved by the pump, typically measured in cubic meters per hour (m<sup>3</sup>/hr). Head: The height the water is being pumped, typically measured in meters (m).
