

PRINCIPLE OF HIGH TEMPERATURE ENERGY STORAGE

What is high-temperature energy storage? In high-temperature TES, energy is stored at temperatures ranging from 100°C to above 500°C. High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and thermochemical storage of heat and cooling (Table 6.4).

Why are thermochemical energy storage materials larger than sensible heat storage materials? This requires the understanding of a broad portfolio of storage designs, media, and methods.
