

PROSPECTS OF CHARGING PILE AND ENERGY STORAGE

How a charging pile energy storage system can improve power supply and demand? Charging pile energy storage system can improve the relationship between power supply and demand. Applying the characteristics of energy storage technology to the charging piles of electric vehicles and optimizing them in conjunction with the power grid can achieve the effect of peak-shaving and valley-filling, which can effectively cut costs.

What are electric vehicle charging piles? Electric vehicle charging piles are different from traditional gas stations and are generally installed in public places. The wide deployment of charging pile energy storage systems is of great significance to the development of smart grids. Through the demand side management, the effect of stabilizing grid fluctuations can be achieved.

How a charging pile is developing in China? Under the development of new energy vehicles, especially the tram policy of taxi and online car hailing, has promoted the industrial development of charging piles. China's public charging piles mainly rely on charging owners using charging services to make profits, and many charging pile manufacturers have successfully on the market.

What are the parts of a charging pile energy storage system? The charging pile energy storage system can be divided into four parts: the distribution network device, the charging system, the battery charging station and the real-time monitoring system [3].

How to predict demand for airport charging facilities/piles? In order to predict the demand for airport charging facilities/piles, a demand prediction model was proposed for airports, which includes airside and landside of airports. The airside prediction model was calculated according to air traffic volume and vehicle pile ratio.

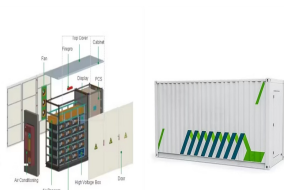

PROSPECTS OF CHARGING PILE AND ENERGY STORAGE

How much does Airport Charge pile cost? According to the survey, the price of charge pile used in airport was 1 million Yuan/set, while the ordinary one in resident area is generally 80000 Yuan/set. Installation cost of airport charging pile is also high. Government subsidy policy is mainly for charging piles used by the public, and less for airports.
