

RUSSIA ENERGY BOX

How is energy used in Russia? Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is Russia's energy strategy? Russia's energy strategy prioritizes self-sufficiency in gasoline, so it tends to export minimal volumes. However, Russian refiners produced roughly double the diesel needed to satisfy domestic demand, and typically exported half their annual production, much of it to European markets.

How much electricity does Russia generate? Russia generated 44% of its electricity from natural gas, followed by 20% from nuclear, 19% from hydroelectric, and 15% from coal. Oil, other renewables, and other sources each represented less than 1% of Russia's electricity generation in 2021 and 2022.⁴⁸

Is Russian hydro resource base economically feasible? Gross theoretical potential of the Russian hydro resource base is 2,295 TWh per year, of which 852 TWh is regarded as economically feasible. Most of this potential is located in Siberia and the Far East.

Which oil refinery supports Russia's domestic market? The Omsk refinery supports Russia's domestic market with an installed refining capacity of over 441,000 b/d of crude oil and a light petroleum product yield of 80%. Gazprom Russia's second-largest oil producer and third-largest refiner by capacity. ²¹

How many hydropower plants are there in Russia? Hydropower accounts for about 20% of Russia's total electric power production. The country has 102 hydropower plants in operation, with RusHydro the world's second-largest hydroelectric power producer. Hydro generation (including

The US blacklisted Red Box and its two heavylift vessels, the 28,900-dwt Audax and 28,800-dwt Puganax (both built 2016), in May, saying that it carried LNG modules for Russia's Arctic LNG 2 project.

Russia is using energy to enhance its influence in Central Asia and achieved notable successes in 2023, including building generating capacities, increasing electricity and hydrocarbon supplies to the region, and developing its transit potential to China. In this Q&A, the author discusses the different facets of Russia's strengthening energy

Amidst a perfect storm of conditions leading to increased gas prices and greater demand, Russia is leveraging its role as a major energy supplier to put pressure on Europe. As Benjamin Schmitt notes below, the crisis has been brewing due to "a colder-than-normal spring, calmer-than-normal summer (leading to a drop in electricity production from EU wind turbines), and an ???

Chinese investments in Russian Arctic energy projects are facing complications due to sanctions on Russia. Because of assembly requirements at Murmansk, a third Train 1 module shipped almost concurrently onboard the Red Box Energy Services vessel Audax via the Northern Sea Route, arriving in early February 2022 (fig. 9).

The Russian Energy Week Forum serves as a platform for them to work together in finding solutions for these issues, topics that are priorities for the development of the Russian and international fuel and energy industry. I wish all of the participants a productive discussion touching on all of the industry's strategically crucial topics."
