

RÃ©UNION SOLLA SYSTEM

Can Reunion Island achieve energy autonomy by 2030? Reunion Island, a French overseas region located in the Indian Ocean, is facing a three-fold challenge combining demographics, the environment and energy. To limit its heavy dependence on imported fossil fuels, Reunion Island aims to achieve energy autonomy by 2030 based on greater energy efficiency and renewable energy alternatives.

How did Reunion Island get its energy? Whereas in the 1980s all of the energy produced on Reunion Island came from renewable hydroelectricity, the island gradually became dependent on imported fossil fuels.

Does Reunion Island need economic support? The development of biomass, particularly energy cane, is economically interesting. Solar and marine energy need political and/or economic support to be developed. Reunion Island, a French overseas region located in the Indian Ocean, is facing a three-fold challenge combining demographics, the environment and energy.

Why is La Reunion a World Heritage Site? Declared a UNESCO world heritage site in 2010, the French overseas region of La Reunion Island, located between Mauritius and Madagascar in the Indian Ocean, is facing a threefold challenge- involving demographics, the environment and energy. From 1970 to 2012, the island's population nearly doubled from 450,000 to 837,900 inhabitants.

Is Reunion Island a renewable resource? Hydroelectricity is the island's main renewable resource. It accounted for 17,2% of its total electricity production in 2015 (133,6MW of installed capacity), spread over six sites in the eastern part of the island. An additional capacity of 50MW should be deployed by 2030. Reunion Island's biomass potential is considerable.
