

# SOLAR ENERGY STORAGE IN VIETNAM

---

How much does a new energy storage project cost in Vietnam? Photo by AMI AC Renewables An energy storage project costing nearly \$3 million will be built in Khanh Hoa Province as part of a new joint venture. Funded by the U.S. Mission Vietnam, the project aims to demonstrate how it can reduce power losses and help Vietnam integrate more renewable energy into the nation's power system.

Can solar energy storage be commercially viable in Vietnam? The purpose of the pilot project is to demonstrate the commercial viability of energy storage in Vietnam, a country which has rapidly adopted solar PV in the past few years, but is yet to start doing the same for batteries, or other forms of energy storage technology.

When will the battery energy storage system be installed in Vietnam? The power plant will be the first in Vietnam to deploy the Battery Energy Storage System. Nguyen Nam Thang, CEO of AMIAC Renewables, said at the signing ceremony there was a determination to put the project into operation before the third quarter of 2024.

Is a large-scale battery energy storage system (Bess) being deployed in Vietnam? Steps forward have been taken for the first pilot deployment of large-scale battery energy storage system (BESS) technology in Vietnam.

How can Vietnam improve its energy system? Vietnam's energy system is in a state of transition too, with the government seeking to balance the need for economic growth with the need to reduce GHG emissions and increase renewables. Under the current scheme, the only options for further renewables development involve additional solutions such as storage.
