

# SOLAR PANEL DISTRIBUTION STORE

Solar array mounted on a rooftop. A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.

Solar panels are built with materials that physically interact with certain wavelengths of solar energy. This enables them to transform solar energy into electricity. Here's how solar panels absorb and store energy. What's in a solar panel? Traditional solar panels are made with silicon crystals. Silicon is a very special material.

Signature Solar provides solar panels & components and full kits for off-grid, grid-tie and custom diy solar systems. Providing Solar 101 and hands on experience within the solar industry. Quality inverters, bifacial solar panels, complete solar ???
