Solar PV accounted for 4.5% of total global electricity generation, and it remains the third largest renewable electricity technology behind hydropower and wind. China was responsible for about 38% of solar PV generation growth in 2022, thanks to large capacity additions in 2021 and 2022.

Net metering is an arrangement between solar energy system owners and utilities in which the system owners are compensated for any solar power generation that is exported to the electricity grid. The name derives from the 1990s, when the electric meter simply ran backwards when power was being exported, but it is rarely that simple today.

In some cases, way more than you probably need. According to our calculations, the average-sized roof can produce about 21,840 kilowatt-hours (kWh) of solar electricity annually ???about double the average U.S. ???
