

# SPAIN SOLAR ENERGY USA

How much solar power does Spain have? In 2010, Spain maintained approximately 10 percent of global installed capacity share. About 10 percent of the country's energy comes from solar power, two percent higher than the average for most countries.

Is solar power underused in Spain? Even in the winter it rarely rains and even cloudy days are few and far between. For those living in more northerly climes then it can be a little bewildering to see that solar power in Spain appears to be underused and traditional energy sources continue to power homes and offices.

Is Spain a leader in concentrated solar power? As a legacy from Spain's earlier development of solar power, the country remains a world leader in concentrated solar power, accounting for almost a third of solar power installed capacity in the country, a much higher ratio than that for other countries as of 2017.

When will solar power be available in Spain? In May 2017, Spain held an auction for new renewable capacity to be online by 2020. Solar projects won only 1 MW of the 3000 MW awarded. After complaints by the solar industry which felt the auction terms favoured wind power, another auction occurred in July.

Does Spain have a 76GW Solar Power Plan? "Spain updates NECP, targets 76GW of solar PV by 2030". PV Tech. Retrieved 9 July 2023. ^Gareth Chetwynd (29 June 2023).
