

SPECIAL POWER SUPPLY FOR ENERGY STORAGE

What is a supercapacitor energy storage system? A 400 kW, 1.0 kWh supercapacitor energy storage system that aims at improving the power quality in the electrical grid, both in steady state (e.g., harmonic compensation) and during transients (e.g., fault-ride through). A 100 kW, 200 kWh battery energy storage system, that is based on distributed MMC architecture.

Why do we need energy storage systems? As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

Can electrical energy storage solve the supply-demand balance problem? As fossil fuel generation is progressively replaced with intermittent and less predictable renewable energy generation to decarbonize the power system, Electrical energy storage (EES) technologies are increasingly required to address the supply-demand balance challenge over a wide range of timescales.

Why do energy storage systems need a DC connection? DC connection
The majority of energy storage systems are based on DC systems (e.g., batteries, supercapacitors, fuel cells). For this reason, connecting in parallel at DC level more storage technologies allows to save an AC/DC conversion stage, and thus improve the system efficiency and reduce costs.

What is electrical energy storage (EES)? Electrical Energy Storage, EES, is one of the key technologies in the areas covered by the IEC. EES techniques have shown unique capabilities in coping with some critical characteristics of electricity, for example hourly variations in demand and price.

SPECIAL POWER SUPPLY FOR ENERGY STORAGE

How to develop a safe energy storage system? There are three key principles for developing an energy storage system: safety is a prerequisite; cost is a crucial factor and value realisation is the ultimate goal. A safe energy storage system is the first line of defence to promote the application of energy storage especially the electrochemical energy storage.
