

SWITZERLAND ENERGY PORT

Does Switzerland have seaports? Switzerland does not have seaports but inland river ports which are the sub-ports of the main port of Basel. The port of Basel is strategically located at the heart of Europe and despite being a river port, it contributes significantly to the Swiss economy by handling the majority of Swiss exports and imports.

Who manages the Swiss ports? The Swiss ports are operated and managed by the Swiss Rhine Ports. This body also undertakes maintenance and development of infrastructural facilities, expansion projects, investment, marketing and communication services in the Swiss ports. The Basel Port is Switzerland's most important river port.

What is the port of Switzerland? Port of Switzerland is the national transport hub along the freight corridor Rotterdam - Basel - Genoa. Our three ports, Basel-Kleinmünchen, Birsfelden and Murtens-Auhafen, handle six million tons of goods and more than 120 000 containers per year. This corresponds to 10% of all Swiss imports.

What type of energy is used in Switzerland? Most energy consumed in Switzerland is in the form of petroleum and motor fuels (43%), followed by electricity (26%) and gas (15%). Most of this energy is used by private households and transport (each one third), while manufacturing and services each account for just under one fifth.

What is Switzerland's energy strategy? Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels. Launched in 2011, the 2050 Energy Strategy aims to shift towards sustainable energy practices, achieving climate neutrality and reducing reliance on fossil fuels.

Where does the oil come from in Switzerland? The Port of Basel receives more than 10% of the Swiss imports coming from the seaports of Antwerp, Rotterdam and Amsterdam. Also, about 30 to 40% of mineral oil comes to Switzerland through the Swiss ports. The port is well equipped

In Switzerland, renewable energy is predominantly used to produce electricity (80%). While the share of solar power in Switzerland's total production mix is still low, it has increased in absolute terms more than any of the other "new" renewables. This trend is continuing as regards both private consumer and industrial use.

The actual cargo handling, including loading and unloading of vessels, is carried out by our selected operators. In addition to this, we exercise strategic oversight and control to ensure optimal results for our partners and the Port of Gothenburg as a whole. On our website, you will find everything you need to know about the port.

VARO Energy is committed to accelerating the energy transition with a blend of conventional and sustainable energy solutions. Learn about their innovative approach, reliable energy supply, and sustainable practices that meet diverse energy needs across Europe.

Together we are accelerating the energy transition, even in the hardest-to-abate sectors. We are working with the Port of Rotterdam to help decarbonise maritime transport and inland shipping in Europe's largest port. Since 2018, the Port of Rotterdam has used VARO's HVO100 (100% Hydrotreated Vegetable Oil) for its service fleet.
