Should I Keep my EV plugged in during long-term storage? According to Driving Electric, you should not keep your EV plugged in during long-term storage, especially when it's at 100% charge. Instead, charge it to around 80% and leave the electric vehicle unplugged.

Should you store your electric vehicle for a long time? But occasionally, work or an epic adventure may draw you away from home. That will mean storing your electric vehicle for an extended period. Storing any type of vehicle isn't optimal; cars are designed to be used. Not using them for a long time can cause issues. On the one hand, storing EVs can be less of a headache.

How should I store my electric vehicle's battery? To prepare your electric vehicle for long-term storage, maintain the high voltage (HV) battery state of charge at approximately 50%. Additionally, store your vehicle in a dry, ventilated area, protecting it from sunlight if possible.

Do electric cars need charging spaces? There may be spaces reserved for all electric vehicles, but think carefully before leaving your car in a charging space. Many public spaces charge idling fees and it may be unnecessary, expensive, and even damaging to charge your vehicle fully if you won't be driving it for a while.

How should you store an EV in a garage? To store an EV in a garage, aim for a climate-controlled space for the best results. If you don't have access to a garage, storing your EV under a carport or shade awning is preferable to leaving it in direct sunlight.
