

# THE WHOLE PROCESS OF ENERGY STORAGE EPC PROJECT

What is the EPC process? The EPC process, also known as Expanded Polystyrene Molding or Full Mold Process, is an economical method for producing complex, close-tolerance castings using an expandable polystyrene pattern and unbonded sand.

What is the EPC phase in a project? The EPC phase, also known as the Execution phase, follows the FEED or Front End Engineering Design phase. The FEED is a basic engineering design used as the basis for the EPC phase and can be divided into separate packages covering different portions of the project.

What is the advancing contracting in Energy Storage Working Group? The Advancing Contracting in Energy Storage (ACES) Working Group is an independent industry led and funded effort founded to develop a best practice guide for the energy storage project development community.

What is the best practice guide for energy storage projects? This Best Practice Guide covers eight key aspect areas of an energy storage project proposal. This Guide documents the industry expertise of leading firms, covering the different project components to help reduce the internal cost of project development and financing for both project developers and investors.

How does battery energy storage connect to DC-DC converter? Battery energy storage connects to DC-DC converter. DC-DC converter and solar are connected on common DC bus on the PCS. Energy Management System or EMS is responsible to provide seamless integration of DC coupled energy storage and solar. Typical DC-DC converter sizes range from 250kW to 525kW.
