Therefore, the inverter will not have excess electricity to be sent to the grid (ie: automatic limiter function). 1200W Grid tie inverter with limiter 3 kind different specifications for 3 kind DC input solar panels or batteries, please choose the right one. 1200W (4 ???

The "limiter" looks at the load and then tells the grid-tie inverter to reduce its output to equal the load. As they explain, the purpose of the "limiter" is to get around a smart meter (which charges you for power you export to the grid), by greatly reducing the power sent to the grid.

I was thinking about using a 100/20 and connecting a limited tie grid inverter to the load output, let's say limited at 100W so when the batteries are full, at least 100W are inserted into the grid, and when the battery is empty, e.g. after a night, and its charging during the day, the overhead will be put into the grid, too? New to all of this!
