What type of energy storage system does the Passat GTE use? The electrochemical energy storage system used in the Passat GTE is a modular lithium-ion high-voltage battery, Figure 6, designed for fully electric and hybrid operation of a plug-in hybrid vehicle. It consists of 96 prismatic cells with a capacity of 28 Ah each.

Will Volkswagen be able to use electric vehicles as energy storage? Every decision was made with these aspects in mind. The use of electric vehicles as energy storage was considered from the outset. Thankfully, Volkswagen joined the project in April 2021 and we are now ready to go. This will be one of the biggest changes in the energy market."

What type of energy storage system does a Honda CR-V use? Serving as the electric energy storage system is a liquid-cooled lithium-ion high-voltage battery with an energy content of 9.9 kWh. For external charging from the AC grid, there is a charging socket in the radiator grille and a charging device in the engine compartment. The fuel tank is a pressurised system with a capacity of 50 l.

What is a multiple clutch system? The multiple clutch system, which runs in oil, consists of the drive clutches K1 and K2 and the engine clutch K0. The compact actuating unit for the engine clutch is in the clutch space between the electric motor's rotor mount and the input shaft. The rotor mount is part of both the electric motor and the drive clutch.
