

WENSHAN POWER NATIONAL DEVELOPMENT ENERGY STORAGE

Will China achieve full market-oriented development of new energy storage by 2030? The country has vowed to realize the full market-oriented development of new energy storage by 2030, as part of efforts to boost renewable power consumption while ensuring stable operation of the electric grid system, a statement released by the National Development and Reform Commission and the National Energy Administration said.

Will China build a new energy storage system? Technicians inspect wind farm operations in Hinggan League, Inner Mongolia autonomous region, in May 2023. WANG ZHENG/FOR CHINA DAILY China has been stepping up construction of new energy storage in recent years to build a new power system in the country amid its green energy transition, said authority.

Why is new energy storage important? New energy storage is an important foundation for building a new power system in China, enjoying the advantages of fast response, flexible configuration and short construction periods. "We believe that its (new energy storage) installed capacity is going to surge and will see rapid development in the sector," Chen said.

Will China expand its energy storage capacity by 2025? China aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by 2025, with an installed capacity of more than 30 million kilowatts, regulators said.

How big is China's energy storage capacity? As of the end of 2022, the total installed capacity of energy storage projects in China reached 59.4 gigawatts (GW), with pumped storage taking up to about 77 percent and new energy storage accounting for about 22 percent, according to Chen Haisheng, a researcher from the Institute of Engineering Thermophysics under the Chinese Academy of Sciences.
