

WHAT DOES THE PARK POWER STORAGE EQUIPMENT INCLUDE

What are battery storage power stations? Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

Why do battery storage power stations need a data collection system? Battery storage power stations require complete functions to ensure efficient operation and management. First, they need strong data collection capabilities to collect important information such as voltage, current, temperature, SOC, etc.

Why is system control important for battery storage power stations? Secondly, effective system control is crucial for battery storage power stations. This involves receiving and executing instructions to start/stop operations and power delivery. A clear communication protocol is crucial to prevent misoperation and for the system to accurately understand and execute commands.
