

# WHERE IS THE ZHONGGUANCUN ENERGY STORAGE ALLIANCE

How much energy storage capacity did China install in 2023? The Zhongguancun Energy Storage Industry and Technology Alliance (CNESA) says China installed 21.5 GW/46.6 GWh of stationary storage capacity in 2023. CNESA said in a new report that China added 21.5 GW/46.6 GWh of new energy storage installations in 2023, up 194% year on year.

Why is China launching a national energy storage Industry Innovation Alliance? [Photo/China News Service] China came up with a national energy storage industry innovation alliance on Monday aiming to further boost the country's energy storage sector, as the country aims to promote large-scale use of energy storage technologies at lower costs to back up the world's biggest fleet of wind and solar power plants.

Will China's new energy storage capacity be 30 gigawatts by 2025? China is targeting new-type energy storage installed capacity of 30 gigawatts by 2025, part of efforts to boost renewable power consumption and ensure grid stability, according to a statement by the National Development and Reform Commission and the NEA.

How much energy will China have in 2024? China's cumulative energy storage capacity reached 34.5 GW/74.5 GWh by the end of 2023, and CNESA expects the nation to install more than 35 GW in 2024, with lithium-ion batteries to account for 95% of the total. Renshine Solar has switched on a 150 MW perovskite cell production line.

Why is China embracing new-type energy storage? The new-type energy storage sector is embracing massive opportunities in China as the country has been promoting storage technologies in accordance with a massive wind and solar capacity build-out to allow exports of large-scale clean energy to other regions, Li said.
