Capacity and power output are two of the most important specifications to consider when choosing a battery, says Roy Skaggs, director of sales for Alternate Energy Hawaii. These determine how much electricity your system will be capable of providing.

Is a solar-plus-storage system a good investment? A solar-plus-storage system is likely a worthwhile investment if you're experiencing prolonged power losses multiple times each year. Unfortunately, your solar panels alone won't power your home during an outage because it's a safety risk to utility workers.

What is a home battery storage system? Home battery storage systems have revolutionized the way we manage energy consumption, providing homeowners with greater control over their usage, increased resilience to grid outages and fluctuating energy prices, and improved sustainability.

Do you use AC electricity to power your home? Yes, you use AC electricity to power your home. Any extra electricity you don't consume charges your batteries. When the sun goes down or the power goes out, the energy stored in your batteries powers your home. Batteries aren't the only form of home energy storage.

Are home backup batteries a good investment? Batteries can be a great investment for your home if you frequently experience power outages, are paying high electric bills, or want more energy independence.

How much energy can a battery store? For most battery systems, there's a limit to how much energy you can store. To store more, you need additional batteries. Even if you don't pull electricity from your battery, it will slowly lose its charge over time.
