Absorption of a photon in a material means that its energy is used to excite an electron from an initial energy level Ei to a higher energy level Ef, as shown in Fig. 3.1 (a). Photons can only be absorbed if electron energy levels Ei and Ef are present so that their difference equals the photon energy, h? 1/2 = Ef ???Ei. In an ideal semiconductor

Some of it falls on the earth. Sunlight that we receive from the sun is nothing but solar energy. When this free-falling solar energy hits the surface of solar panels, the energy is absorbed by the material of panels to generate electricity. To explain how solar panels work and what material they are made of, we first need to understand solar

19. A PV cell is a light illuminated pn- junction diode which directly converts solar energy into electricity via the photovoltaic effect.
